1. Introduction

The Expense Tracker is a mobile application designed to help users record and manage their daily expenses. It enables users to monitor income, expenses, recent transactions, and monthly summaries through a simple interface. The purpose of this project is to create low-fidelity wireframes that define the application's structure before developing the final user interface.

2. User Research

Objective:

To understand the basic needs of users while managing their daily expenses.

Key Findings:

- Users prefer a simple and easy-to-use interface.
- Users want to quickly add expenses.
- A dashboard showing balance, income, and expenses is useful.
- Monthly reports help users analyze spending habits.
- Easy profile management improves usability.

3. User Persona

Name: Rahul Kumar

Age: 24

Occupation: Software Engineer

Goal:

Manage daily expenses efficiently.

Needs:

Easy expense tracking, monthly reports, and quick access to account information.

Pain Points:

Existing applications contain unnecessary features and make expense tracking difficult.

4. User Flow

5. Low-Fidelity Wireframes

Splash Screen

Displays the application logo, app name, and a Get Started button.

Login Screen

Login

Don't have an account? [Sign Up](#)

Allows users to log in using their email address and password.

Home Dashboard

Displays the total balance, income, expenses, and recent transactions.

Add Expense Screen

The image shows a mobile app interface for adding an expense. At the top, the status bar displays the time 9:41 and battery level. Below the status bar is a header with a back arrow icon and the title "Add Expense". The form consists of several input fields: "Expense Name" with a placeholder "e.g. Groceries", "Amount" with a placeholder "₹ 0.00", "Category" with a dropdown menu labeled "Select category ▾", "Date" with a placeholder "DD / MM / YYYY" and a calendar icon, and "Notes" with a placeholder "Add notes...". A dark "Save" button is located at the bottom of the form.

9:41

< Add Expense

Expense Name

e.g. Groceries

Amount

₹ 0.00

Category

Select category ▾

Date

DD / MM / YYYY

Notes

Add notes...

Save

Allows users to enter expense details such as amount, category, date, and notes.

Reports Screen

Displays the monthly summary using simple chart placeholders and summary cards.

Profile Screen

Shows user profile information and application settings.

6. Design Thinking Process

Empathize: Understand users' problems in tracking daily expenses.

Define: Identify the need for a simple expense management application.

Ideate: Plan features such as expense tracking, reports, and profile management.

Prototype: Create low-fidelity wireframes representing the application screens.

Test: Review the wireframes and gather feedback for future improvements.

7. Conclusion

The Expense Tracker wireframes provide a clear overview of the application's layout and navigation. The low-fidelity design helps visualize the user experience before developing the final mobile application.
